.

#### SUTTON-IN-ASHFIELD URBAN DISTRICT COUNCIL

Chairman of the Council, C. E. Holland, Esq., J.P.

Chairman of the Public Health Committee, F. V. Marshall, Esq.

#### PUBLIC HEALTH OFFICERS

Medical Officer of Health (Part time)-

T. S. McKEAN, M.B., Ch.B., D.P.H.

Chief Public Health Inspector—

P. BRISCOE, M.A.P.H.I., M.R.S.H., R.S.H. Meat I Cert.

Deputy Chief Public Health Inspector—

A. ANDERSON, M.A.P.H.I., R.S.H. Meat I Cert.

Additional Public Health Inspectors—

- J. BOSTOCK, M.A.P.H.I., R.S.H. Meat I Cert.
- J. MURDOCH, R.S.A. (Scotland), Certs. P.H. & M.I. (To September).

W. BLACK, M.A.P.H.I., R.S.H. Meat Inspection, Smoke and Sanitary Science Certs. (From December).

Chief Clerk-

Miss M. SEVERN (Part time).

Clerks-

Miss S. VARDY

Miss P. MOOR

### To the Chairman and Members

of

# Sutton-in-Ashfield Urban District Council

Mr. Chairman, Lady and Gentlemen,

I beg to submit my annual report for 1958 together with the report of the Chief Public Health Inspector.

Infantile Mortality remained under thirty, though slightly higher than last year.

Notifications of tuberculosis were more numerous, the rate increasing from thirty-three to sixty-two per hundred thousand. The figure for England and Wales in 1957 was sixty-four. Measles was again epidemic but avirulent. No case of poliomyelitis was notified during the year. Details of inoculations against smallpox, diphtheria, whooping cough, poliomyelitis and tuberculosis are included for your information in section F of the report. The acceptance rate for smallpox vaccination was about thirty-five per cent. compared with thirty per cent. in 1957.

The first five year programme of housing replacement proceeded steadily and should be completed next year, if the requisite number of houses of suitable types is made available.

The reports of the Housing Architect and Housing Manager show the usual gap between supply and demand. Environmental hygiene of the aged has been a matter of some concern and I would suggest that measures to supplement existing welfare services, particularly for old people in council houses, merit your serious consideration.

Your Public Health Inspectors maintained a constant supervision of food supplies and premises, and much of their time was devoted to housing inspections and advice on the various problems on which they were consulted. Every effort was made to encourage owners to make use of the grant available towards the cost of bringing up-to-date older but sound properties.

All practicable conversions to the water carriage system have been completed.

The next and much greater task is to deal with atmospheric pollution, and so prevent or minimise diseases associated with the inhalation of noxious substances, of which a large proportion reaches us through domestic chimneys.

I have appreciated the ready co-operation of the Chief Public Health Inspector and the willing assistance of all members of the staff throughout the year.

Your obedient Servant,

T. S. McKEAN, M.B., Ch.B., D.P.H.,

Medical Officer of Health.

#### ANNUAL REPORT, 1958

Mr. Chairman, Lady and Gentlemen,

I beg to submit my annual report on the progress of work in your Public Health Department. Statistics and full details of inspections and work completed under Housing, Public Cleansing, Salvage, Food Supervision and all other associated Health Services are included in the body of the report.

The final scheme of compulsory conversions of pail-closets was completed during the year. There are only about 120 pails left in the outlying and unsewered areas of the district. It is a great relief to be able to record that 99% of the dwellings in this district are now equipped with modern sanitary conveniences.

I wish I could report that the same percentage of dwellings in the district were fully modernized with hot water and bathrooms, but unfortunately this is not so, and the day when this happy state of affairs may exist seems to be a long way off. There has been a fairly steady flow of applications for grants, but they were not nearly enough, considering the number of dwellings stil! needing modernization and having the necessary life left in them. I feel that some useful publicity could be given to the fact, and owner-occupiers and property landlords should enquire from the Council regarding these grants. Full advice is given willing y and freely. They are at liberty to withdraw their application without any obligation whatsoever, even after the Council have resolved to make a grant and stated the amount. Twenty houses have been modernized during the year. This makes a total of 131 houses dealt with under the scheme.

The slum clearance programme is proceeding normally and according to schedule. No clearance orders were made, and all of the 15 properties represented were treated as Individually unfit. The usual problem of finding suitable alternative accommodation of the right type, and in the preferred district was again in evidence this year. It is becoming increasingly difficult trying to meet all the requirements of many of the families due for displacement.

A considerable amount of your Inspectors time has again been necessary in maintaining a full inspection of meat supplies. This, coupled with other duties in relation to the hygiene of food shops and other food premises, is work which must be done continuously and regularly, if the public are to be assured of clean and wholesome food.

My sincere thanks are due again to Dr. McKean and all members of the Council for support and encouragement, and to the Inspectors, Miss Severn and junior staff for hard work well done.

Your obedient Servant,

P. BRISCOE, M.A.P.H.I., M.R.S.H., R.S.H. Meat I Cert.

Chief Public Health Inspector.

#### **Population**

The excess of births over deaths was one hundred and thirty-eight, and the Registrar General's mid-year estimate of population was one hundred and ten more than last year.

#### **Births**

The birth rate was slightly higher than last year and there was a welcome fall in the still birth rate.

The following table is an analysis of the Rh groups of mothers for births notified during the year.

_			Still	Live	Died under	
			Births	Births	l year	
Rh positive		 	 12	402	9	
Rh Negative	 	 	 2	106	3	
Not Tested		 	 1	93	3	

#### Premature Births

The premature birth rate rose to ninety-four per thousand live births. The survival rate at one month was only a little less than in 1957 in spite of the much higher proportion of the smaller babies born this year.

Fifty-five infants were notified as premature by weight, twin pregnancies accounting for ten of them. Twenty-six were born in hospital and four in private nursing homes Twenty-five were born at home, six of whom were subsequently admitted to hospital, where four died.

Eight of the infants failed to survive for a month.

None of the six infants weighing under 3½lbs. survived.

Premature Birth-Rate per 1,000								
	Survived							
3lb. 4oz.	4lb. 6oz	— 4lb. 15oz.	— 5lb. 8oz.	Total	one month			
10.2	20.4	20.4	43	94	85 %			

The following table shows the details of Rh factor of the forty-two mothers whose blood was examined.

					Infants
				Births	Survived
					one month
Rh Positive	 	 	 31	35	30
Rh Negative	 	 	 11	11	10

#### Still Births

The rate was considerably less than last year. Nine of the still birth infants were premature, three having congenital malformations.

Pregnancies ranged from first to sixth, and the ages of the mother from seventeen to thirty-eight years. Most of them were in the Rh positive group.

Two mothers had a history of previous still birth, one having only one surviving child from six pregnancies. Her last four infants had congenital defects two being still born.

Two mothers had toxaemia of pregnancy and one, ante partum haemorrhage.

The perinatal mortality, which is the combined rate for still births and deaths under one week, was 40.1 per thousand live and still births, compared with 35.1 for England and Wales.

#### Deaths of Infants under One Year

Our rate was 27.4 compared with 21.15 for the Urban Districts of Nottinghamshire, and 22.5 for England and Wales. The neonatal-mortality was 18.8 compared with 16.2.

Prematurity alone or in association with other conditions was the chief cause of death, and all the deaths over one month were due to respiratory infections.

One infant whose mother was Rh negative had an exchange transfusion but died of haemolytic disease.

Two mothers had toxaemia and one was a diabetic.

Bronchitis	•••	• • •	• • •	• • •	•••	•••			18 51 —	69

There were forty-five more deaths than last year, giving a corrected death rate of 14.1, the highest since 1940. Half of the increase was due to infections of the respiratory system in the older age groups and the distribution between the sexes was about four males to one female.

Nine men and one woman died of cancer of the lung; their ages ranged from forty-one to seventy-one years. Four of the men were, or had been miners, and the remainder were employed in various other industries. Though cancer of the lung accounted for one less death than last year, the total deaths for all malignant neop'asms increased by seven.

There were seven deaths of pre-school children. Three, two of whom were mongols and one a mental defective, failed to survive the second year of life. Aplastic anaemia caused the death of a boy aged two years, and cancer killed two children aged four years. A road traffic accident caused the death of a toddler aged three years who was knocked down by a motor cycle.

Two school children aged six and ten years succumbed to respiratory disease, and a third, aged thirteen years, was electricuted by an electric iron in his home.

Extracts from the statistics of Road Traffic Accidents supplied by Chief Inspector Marshall:—

Killed	 • • •					• • •	4
Seriously injured	• • •	• • •	• • •	•••		• • •	46
Slightly injured		• • •	• • •	• • •	• • •	•••	85
Total number of accidents							170

# ANTE-NATAL, POST-NATAL, MATERNITY AND CHILD WELFARE IMMUNISATION AND VACCINATION CLINICS

The following is the time-table of the Routine Clinics:-

Smallpox Vaeeination	1st Thursday of each month 3.30 p.m.	By appointment at M. & C.W. Clinic	By appointment at M. & C.W. Clinie
Immunisation	1st and 3rd Thursdays of each month 2.30—3.30 p.m.	4th Thursday of each month 3.30 p.m.	2nd Tuesday of each month, 2.30—3.30 p.m.
Post-Natal	2nd Monday of each month 2—3 p.m.	Ante-Natal Clinies	2md Wednesday in month 2—3 p.m.
Ante Natal	Every Wednesday and 2nd and 4th Thursdays each month 2—4 p.m.	2nd and 4th Fridays, 2—4 p.m.	1st, 3rd and 5th Fridays, 4th Wednesday, 2—4 p.m.
Maternity and Child Welfare	Tuesdays and Fridays, 2—4 p.m.  Dr. attends every Tuesday, and last Friday in nonth 2.30 p.m.	Every Thursday 2—4 p.m. Dr. attends 2nd and 4th Thursdays in month, 2.30 p.m.	Every Monday 2—4 p.m. Dr. attends 2.30 p.m.
Situation	Sutton-in-Ashfield: Forest Street (Near Library)	Huthwaite:  Glinie, New Street	Skegby and Stanton Hill: Baptist Church, Stanton Hill

The Local Health Authority administer the Clinic Service.

Rhesus typing was continued at Ante-Natal Clinics-

				Mothers	Fathers	Infants
Rh Positive		•••	 • • •	144	4	12
Rh Negative	• • •	•••	 	· 87	0	17

Two hundred and twelve maternity cases were admitted to hospital, ninety-five on account of unsuitable home conditions and the others for medical reasons. Seven mothers and one infant had blood transfusions.

Thirty-seven births were notified from nursing homes.

A total of four hundred and eight blood donors, including forty-eight new volunteers, attended the two sessions held in the district by the Regional Transfusion Service. It took sixteen hundred blood donations to satisfy the needs of patients in the Mansfield Group of Hospitals during 1958.

#### National Assistance Act, 1948

No new cases were dealt with during the year.

#### Mortuary

The Council has an agreement for the use of the mortuary at King's Mill Hospital, but, on the instructions of the Coroner, the forty-four cases removed during the year were taken to Mansfield Borough mortuary. The cost to the Council was £110.

# Medical Examinations of Staff and Workmen Sickness and Superannuation Schemes.

There were twenty-seven examinations during the year.

Acceptance not recommended	l			•••	5

#### SECTION C.

## SANITARY CIRCUMSTANCES OF THE AREA WATER SUPPLY

During the year the water mains were extended by four thousand and five hundred lineal yards.

The quantity available from the well at Rushley supplied less than half the total volume passing through the mains, the remainder coming from the Meden Valley Joint Board and Mansfield Borough. About nineteen million gallons were passed on to the Urban District of Kirkby-in-Ashfield.

From	Rushley	• • •	 	232,573,000	gallons
From	Meden Valley		 	298,519,000	gallons
From	Mansfield		 	62,875,000	gallons
					_
				593,967,000	gallons
To Ki	rkby-in-Ashfield		 	19,193,000	gallons

Twelve samples of chlorinated Rushley water were submitted for chemical analysis and thirty-six for bacteriological examination, and all were satisfactory.

Chemical analysis of four samples of the Meden Valley supply and bacteriological examination of sixteen samples gave satisfactory results.

Eleven samples from houses receiving the Mansfield Supply were examined bacteriologically and were satisfactory.

Six samples from the Public Baths were satisfactory.

Representative results of drinking water from Rushley and of the water from the Public Baths are given below.

	(a)	(b)

#### Investigation of Atmospheric Pollution

The four instruments for the measurement of atmospheric pollution have been sited for twelve months in those areas considered to be the more densely habited, and also where readings could be taken in relation to density of habitation and prevailing wind current. The table below gives the fu'll readings for each month of the year, and it is noticed that the heavier pollution is shown to be in the New Cross area, which is one of the most densely habited areas in the district, and also an area which is in direct line with the prevailing wind which has already covered three miles of the district.

All indications are now that pollution in this district is primarily caused by domestic chimneys. The programme of electrification of the four collieries in this area is now we'l advanced. Other industry has also done its share in reducing smoke. If we are to have clean air, then the private householder must be prepared to accept his share of the cost and responsibility. One fact which emerges quite definitely is that any scheme in this area intended to make a substantial reduction in domestic smoke will need to include several hundreds of dwelling houses in order to be effective.

#### Public Cleansing and Salvage Collection

#### Public Cleansing

The refuse collection service proceeded smoothly and without any great difficulties. In spite of the abnormally wet weather, a weekly service was maintained. The labour force was kept up to strength and this was again helped considerably by the regular attendance of the collectors. The incentive bonus scheme, payable to all those employed on refuse and salvage collection has operated for several years. It has helped considerably in attracting and retaining the most suitable men for this ardous work.

The complete reconditioning of three refuse vehicles was carried out in our own workshop, in addition to the normal maintenance and servicing of the whole fleet. As a result, no new refuse vehicles were purchased. One redundant tractor was converted to a snow plough. This will ensure, after heavy snow falls, that the refuse team can get out and about in their work, particularly in areas where the principal road ploughs do not operate for several days until the main traffic routes are completely cleared.

The new tip joining Stoneyford Road and Davies Avenue was used for all refuse disposal during the whole of the year. It would appear that there is a further twelve months tipping on this site, which will then have been raised 10 feet at its deepest point. It was unfortunately fired on three occasions and matters would probably have been much worse had it not been for the able co-operation of the police.

At the Health Department Depot, work is almost completed on the provision of new accommodation for the men in which they can have their midday meal. Hot showers and drying rooms for wet clothes will be provided.

#### Cesspools

This cleansing service is operating quite satisfactorily. Delays do sometimes occur at properties where access for the pumping unit is impossible in bad weather.

#### Salvage

The collection of waste paper and fibreboard shows an increase of 30 tons over last year, due to some relaxation of control from the paper mills.

The tonnage of baled tins and scrap metal was less than half of our last year's collection. There was no market for this material and collections had to cease during the summer.

Sales were as follows:-

					Tons	Cwts.	£	s.	d.
Waste Paper	• • •	• • •			468	13	3824	9	7
Textiles	• • •	• • •		• • •		4	3	4	0
Tins and Metal		• • •	• • •	• • •	19	14	159	16	0
				-	400	1.1	0007		
					488	11	3987	9	7
				1957	483	$18\frac{3}{4}$	3884	12	8
Waste Food									
					Tons	Cwts.	£	s.	d.
1958				• • •	643	7	3216	15	0
1957				• • •	696	6	3481	10	0

Collections during the year were approximately 53-tons less than last year. There is still a good market for this material.

#### SECTION D

#### HOUSING

Seventy-six new houses were completed during the year and one hundred and six older houses became available as relets. Fifteen of the new houses and twenty of the relets went to tenants selected by the Health Department, two to overcrowded families and the remainder to families from properties to be demolished.

The waiting list was reduced by three hundred and eighteen — one hundred and forty-seven on re-housing and one hundred and seventy-one by review of the list—but the reduction was more than offset by new applications, so that the final figure at the end of the year showed an increase of sixty-three.

The Housing Manager and Housing Architect have supplied the following details:-

Houses rendered fit as a result of formal action		• • •	132
Houses rendered fit by Local Authority in default			8

#### Housing Act, 1957 — Overcrowding:

Twelve households were investigated for alleged overcrowding. In one there was moral overcrowding and a more suitable house was provided during the year.

In the only other case requiring action, two families lived in the house and there was legal overcrowding. The lodger family was on the waiting list and the case was dealt with by the Housing Committee.

On list 31/12/57 Added 1958	•••		•••	•••		•••	5 1
Re-housed 1958		• • •	• • •	•••	• • •	•••	6 2
On list 31/12/58			•••	•••	•••	•••	4

Two of the cases on the list were recommended in 1956 and two in 1957.

#### Re-housing and Demolition

Thirty-three families were re-housed.

Six families living in unfit houses preferred to remain there indefinitely rather than accept the new houses offered. Two wished to be accommodated in the vicinity of their old home, and two preferred bungalows. In one case the house was not a suitable type, and in the other the area was unsuitable.

Three houses were added to the list of unfit properties. At the end of the year thirty-one houses awaited official representation, and twenty-six families in houses previously represented awaited re-housing.

#### Camping Sites, Temporary Dwellings, etc.

The licensed sites in the area were well conducted during the year and all complaints were settled informally. Trouble was again experienced from the casual hawkers who periodically invade the area with the object of staying as long as possible. It is always the local authority who have to do the cleaning up operations after they leave a site. Once again reference must be made to the excellent co-operation of the police in dealing with these problem travellers.

One landowner was successfully prosecuted for the use of land as a caravan site in contravention of the provisions of the Public Health Act.

#### FACTORY ACTS, 1937 & 1948

#### Public Market

There was very little cause for complaint. No meat or meat products are sold from the stalls, only fruit, vegetables and a little fish. The mobile washing van is always available and in use on the market for all the food handlers.

#### **General Observations**

The department continues with the periodical inspection of food shops and food preparation premises. The policy of informal talks, on the spot, with the food handlers concerned has proved both satisfactory and advantageous to both sides. So much depends on the feeling of goodwill existing between the food handlers and the inspectors, that every effort is made, on all occasions of enforcement, to do so informally and agreeably if at all possible. Continual encouragement and education is the most effective means of showing that each regulation has been made for a specific reason, and in order to elimate a specific danger.

#### Disposal of Condemned Meat and Foods

Some foods are passed to the Council's waste food project, where all the food is thoroughly steam cooked and sold for pig feeding. Some is incinerated, but the majority is passed to the local manure works, where it is processed to fertilizer.

#### Food and Drugs Act—Legal Action

The Council successfully prosecuted one firm on two occasions for the sale of bread containing extraneous matter. They also successfully prosecuted in the case of an apple charlotte containing a nail. A prosecution against a Dairy Company for the sale of a bottle of milk containing glass splinter was unsuccessful.

All these prosecutions were taken under Section 2 of the Food and Drugs Act, 1955. The works of the three firms prosecuted were all situated in districts outside this area.

#### SECTION F.

# PREVALENCE OF, AND CONTROL OVER, INFECTIOUS AND OTHER DISEASES

#### Scarlet Fever

Notifications were received each month with the exception of May. More than half of the fifty-six cases occurred during the winter months, and two thirds of the total were in the five to nine years age group. Four children were treated in hospital.

#### Diphtheria

The last case in an immunised child occurred in 1944 and in an unimmunised child in 1946.

Statistics for the last twenty-four years are summarised below.

	Cases	Deaths
1935—1940 (inclusive) (before immunisation)	284	13
1941 (first year of immunisation)	55	4
1942—1946 (inclusive)	26	2
1947—1958 (inclusive)	0	0

#### Prophylaxis

The normal procedure is to give three injections of combined diphtheria and whooping cough prophylactic beginning at about the age of four months, and a boosting dose of diphtheria prophylactic at school age. Children who have diphtheria prophylaxis only, are given two injections of formol toxoid.

#### Whooping Cough

Thirty-three cases were notified, two thirds of them during February and March.

With the exception of two children transferred from Harlow Wood to Forest Hospital, all were treated at home and there were no deaths.

Thirteen of the children were in four households, in one of which there were five cases, three who had been immunised and two who had not.

Nine of the infections occurred in children who had received prophylactic injections. The interval between the last injection and the onset of the illness was from two to four years in seven cases, and in the two others it was five months and eight years.

#### Measles

For the second year in succession there was a summer epidemic with the peak in July, a month later than in 1957. The pattern is unusual for measles, both in general trend and the month of highest incidence. The only other consecutive years showing a rising incidence were 1951 and 1952, with the peak in April and November respectively.

Notifications numbered seven hundred and twenty-three and there were no deaths.

Three children were admitted to hospital.

#### Acute Poliomyelitis

Though it was our good fortune to escape clinical infections during 1958, it cannot be expected that such a favourable cicumstance will continue indefinitely. During the year nine cases of paralytic poliomyelitis were notified in County Districts, and three in the City of Nottingham. Corrected figures for England and Wales for the first three quarters of the year show eight hundred and seventy-seven paralytic cases, with seventy-five deaths.

#### **Prophylaxis**

There was some uncertainty and confusion in the minds of the public caused by the several types of vaccine available and supplies were uncertain. However, the initiative of the chief clerk, who was ably supported by her assistants, enabled me to make full use of such vaccine as became available in spite of the many administrative difficulties. The health visitors bore the brunt of the practical work in the clinics and had the help of part time clerks. Medical duties were shared by general practitioners and assistant county medical officers.

At the end of the year there were only one hundred and thirty on the register for first injections. It is hoped that when applications come in from the young adults, to whom the offer of vaccination was extended towards the end of the year, there will be regular and adequate supplies of vaccine available.

#### Gastro Enteritis

Three children were admitted to hospital. The final diagnosis was non infective enteritis, but one of them, aged eleven weeks, also had pneumonia, which proved fatal.

#### Food Poisoning

A boy aged twelve years was admitted to hospital where the cause was found to be S. typi-murium. No other members of the large family were affected and the origin of the illness was not discovered.

Investigation of a household in which diarrhoea and vomiting occurred after eating tinned dates proved negative for food poisoning.

#### Pneumonia

Six notifications were received and there were two deaths—both in hospital. One of those who died was a man aged sixty years, and the other was a premature infant aged eleven weeks.

#### **Dysentery**

One case, which was probably a laboratory infection, was notified.

Investigation of two suspected cases proved negative.

#### Puerperal Pyrexia

All twelve cases were notified from Kings Mill Hospital, ten of them in the last four months of the year. Two had urinary infections, and the others had a transient pyrexia of which no cause was apparent.

#### **Tuberculosis**

Totals	15 .	10	0	2	3	2	0	0

New cases of tuberculosis numbered twenty-five, almost twice as many as last year and the highest since 1951, when there were thirty-two. The rise in incidence was relatively greater in women in whom the age group most affected was from thirty-five to sixty-five years. In men, the increase was chiefly at ages from twenty-five to fifty-five, and particularly between twenty-five and thirty-five Two of the men were over seventy years of age at the time of primary notification, and one of them died a month later.

In three households there was a secondary case, and in the family history of the infant aged eight months, the grandfather died of pulmonary tuberculosis in 1953 and an uncle was notified as a primary case this year.

Following the notification of the schoolgirl, and information from the medical officer of health of another district that a pupil attending the same school had been notified to him, arrangements were made for X-Ray investigation of the pupils and staff. No active cases were found, but further examination and observation of two of the girls was advised. It is probable that the initial case was the girl who lived outside this district.

Ten of the fourteen men were, or had been miners, eight underground and two surface workers. None of the women was employed in industry.

In addition to the primary cases, four men and one woman were added to the pulmonary register as inward transfers from other districts.

Twenty-four of the new pulmonary cases were admitted to hospital. The interval between primary notification and admission was:—

				Males	Females
Less than one month		• • •	 	14	9
Less than two months	• • •		 	1	0

Hospital admission was not considered necessary for the infant aged eight months.

The patients who died, except the man over seventy, were notified between 1934 and 1951.

The sites of infection in the non-pulmonary cases were the skin and kidney.

Nine pulmonary cases first notified between 1944 and 1952, and two non-pulmonary cases, were removed from the register on recovery. Five were removed on leaving the district.

On Register—	Male	es	Fem	ales	Total
	P.	N.P.	P.	N.P.	
31/12/58	89	7	56	9	161
31/12/57	79	8	54	9	150

Special consideration was given to the housing needs of those suffering from pulmonary tuberculosis and appropriate cases were recommended for priority.

Purchased house	• • •	• • •		1	2
Families on priority list 31/12/58					3

The three families remaining on the list need four bedroomed houses which do not often become available.

With the co-operation of the National Coal Board a lodger family was rehoused and so improved the conditions of one household who already occupy a four bedroomed house.

#### B.C.G.

Tuberculin testing, followed if necessary, by B.C.G. vaccination was offered to children in the thirteen year age group. Some sixty-two per cent. of parents accepted.

	Tested	Positive	Negative	Vaccinated
Quarter ended 31/3/58	134	31	103	102
Autumn, 1958	280	5 <b>7</b>	223	222

Testing and vaccination is also done regularly at the Chest Clinic, King's Mill Hospital. Ten infants, and five children aged 1—4 years were vaccinated.
